

SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR ASSESSING MARKET TRENDS IN A SUPPLY CHAIN MANAGEMENT FRAMEWORK

5

ABSTRACT

A system, method and computer program product are disclosed for assessing market trends in a supply chain management framework. A network is utilized to receive data that relates to the sale of goods by a plurality of stores in a plurality of regions. The received data is tagged with a date on which it was collected and then organized by region and dates. Market trends are then assessed utilizing the organized data.
